

Release Notes 2023

Message Server 18.0

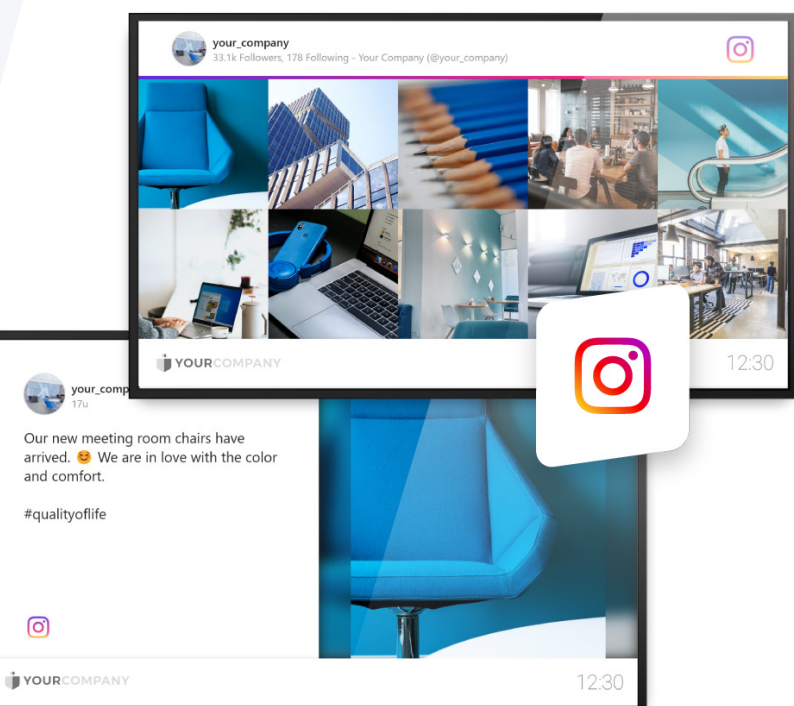

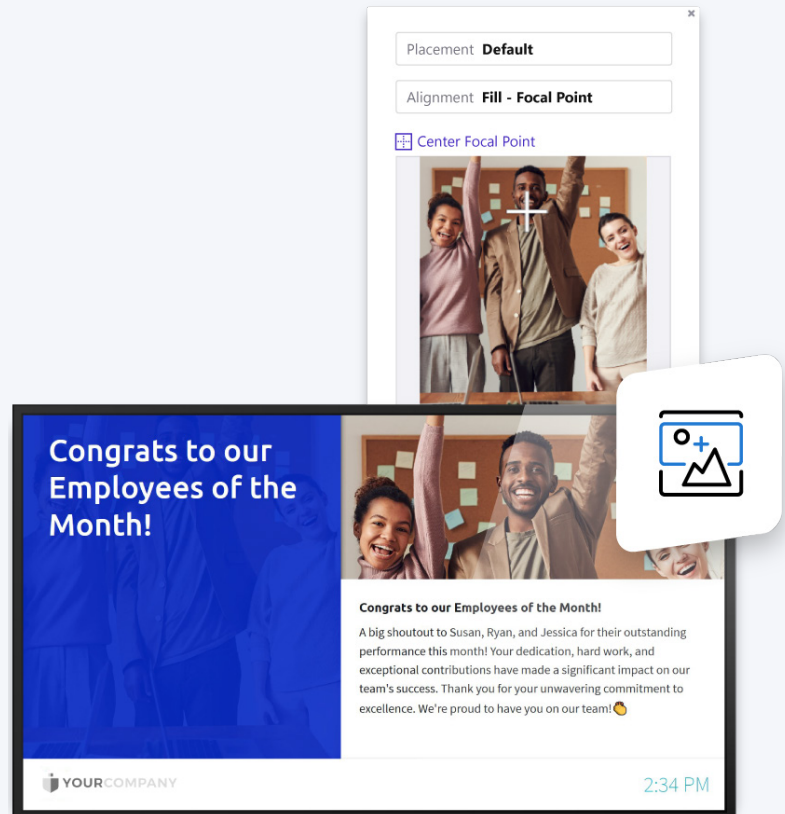

Update now!

Update to the latest version to get all new features

Focal Point for smart image cropping

We're introducing a new feature that improves image placement in templates. The new 'Focal Point' is designed for intelligent image cropping and simplifies how images are shown on each template. Whether your images are portrait or landscape, they will always fit and look perfect. You just need to select the most important part of an image that must be shown, and the rest is done automatically.

Instagram Integration

We've added Instagram to our list of integrations! You can now automatically show the most recent images from your Instagram account on every screen within your organization. Choose from two different templates for displaying your content: 'Single Post' for focusing on individual images, or 'Images Wall' for a dynamic collage of multiple posts.

Other improvements

Alerts in Teams

You can now send alerts directly from the Alert Server to a specific channel in Microsoft Teams, ensuring that your alert notifications have a broader reach and cannot be missed by anyone.

- **Data export**

Export key data such as player and user lists, and message statistics (as a .csv file) for simplified analysis and reporting.

- **Colorful emojis** 🐼 → 🌈🐼

Emojis are no longer just in black and white, but now appear in full color for a more vibrant experience.

- **API improvements**

Our API has been expanded and now includes message status.

- **Bug fixes**

We have added some bug fixes and security patches to this version.

Latest software versions

- Message Server 18.0
- Alert Server 18.0
