Release Notes 2022
Message Server 17.5

netpresenter

Update now!
Update to the latest version to get all new features

Time to scan! QR codes now available for Digital Signage

It's now possible to add a QR code to the messages for your TV screens. With this new feature, a URL added in the 'Hyperlink field' of the Message Server, is automatically converted into a QR code. The QR code is instantly visible on your TV screens and allows your audience to use their mobile phone to read a full message or view more information. You can also use the QR code to easily redirect employees to other (external) sources, such as a document, survey, video, intranet page, or website.

› View our QR templates

Cybersecurity Template Pack update

We've updated our Cybersecurity template pack with 15 new cybersecurity tips. The template pack now consists of as many as 45 tips on topics such as 'Online Safety', 'Ransomware', and 'Vishing'. Use these templates to schedule a weekly cybersecurity campaign to increase your employees' cybersecurity awareness.

Other improvements

Extended statistics

We have extended the time period of our statistics. The number of published messages is now visible for 12 months. The time range of the Engagement details can be set to 7, 30, 120, or 365 days.

365 DAYS

- **Emoji support**

  Emojis are supported in this version. In the Message Server, choose from a list with 72 popular emojis or easily copy any other emoji to the header or body text of your message.

- **Separate Wallpaper and Lock Screen output**

  The wallpaper and lock screen output can be switched on or off separately per site.

- **Bug fixes**

  We have added some bug fixes and security patches to this version.

Latest software versions

- Message Server 17.5
- Alert Server 17.5
- Media Server 4.7
- Player 14.5
- App 6.4
