

Release Notes

SUMMER 2019

Statistics

Measurement matters. From now on, it's possible to measure the reach and impact of your messages. With our new statistics feature, you always have accurate information about the performance of your messages within reach.

Use relevant data to gain insight into the performance of your messages. View key statistics in the blink of an eye, such as engagement details, device breakdown, published messages and more. Our new dashboard also shows an overview of all active and connected devices as well as the number of published messages in the past and present.

More than just numbers

With our new feature, you can also discover which content your employees appreciate most. See how engaged they are and check useful details of your messages like reach, clicks, likes and comments. This way, you can tell how your message are performing and subsequently optimize them to get the most out of Netpresenter!

Notifications

With our new and improved notification feature, you can let your message stand out even more! Publish a message as a pop up on workstations or send push notifications to mobile devices to get the attention of your employees.

Additionally, you can now also use Windows notifications to inform your workforce. Make your message appear as a notification on their desktop and in the Windows action center. By clicking on this notification the Player will open and display the entire message. No one will ever miss your message again!

Other new features that will excite you

Message history

Deleted messages will be stored in the message history.

GIF

The wait is over! From now on, Netpresenter also supports animated GIFs to enrich your messages.

Webpage Integration

Integrate and show a website completely automatic by simply adding a URL to a media object.

Improved Media Gallery

Use the new filters in our improved media gallery.

New Template Gallery

With our new template gallery, selecting the right template for your message has become even easier.

More templates for each domain

It's possible to link more templates to a domain.

User Interface tweaks

Our user interface has been optimized with several tweaks.

Improved Color Themes

The color theme feature has been expanded with some useful improvements.

Standard Direct2D rendering

Get better performance by utilizing the hardware acceleration of the graphics processing unit on your video card.

Toast Notifications

Messages can be displayed as a 'toast notification' on the Windows desktop.

Alert actions

Better safe than sorry. Users now have several ways to react to an alert. Set action buttons and define different alert actions like SMS, call, comments or a hyperlink to extra information.

Call security

I am safe

Delete your data

When you delete a domain or site, all saved data can be permanently deleted.

New Sorting Options

Articles in the app can be sorted, based on their order in the Message Server.

Alert Types

Presets with pre-defined conditions like color, icon and level are added so you can quickly send out an alert.

And there's more!

Check the changelog on our website to see a complete overview of all the new features and improvements. If you want to know more, feel free to [contact us](#). We're happy to help.
